

HYPERHIDROSIS - EXCESSIVE SWEATING

HYPERHIDROSIS is excessive sweating that may affect any part of the body including underarms, hands, feet and the face. Sweating is a normal reaction to stress, heat and exercise. Some people sweat excessively thereby creating social problems, psychological embarrassment and many are not aware of the treatments available.

Botox® injections relieve excessive sweating by blocking the release of acetylcholine which activates our sweat glands. Each twenty-minute injection session can stop sweating for six to twelve months - so, most people can get **satisfactory relief with one or two Botox® sessions each year**. For most people, this therapy is a delightful change, liberating them from daily worries of sweating in the wrong place at the wrong time.

PRICE PER TREATMENT:

\$250 Injection fee

\$400 Drug fee (100 units)

(may be covered by private insurance plan)

**CALL US FOR CONSULTATION OR TREATMENT:
416-445-7546 (SKIN)**
