treatments

Botox® & Restylane® Injections

These highly popular non-surgical procedures are performed by our medical or dental doctors: Dr. K. Lam, M.D., Dr. C. Ung, M.D. (dermatologist) or Dr. Lily Lo, D.D.S. The procedures reduce the appearance of wrinkles by special injections used to relax dynamic muscles of the face (Botox) or by plumping up the skin (Restylane fillers) to lift areas of depression with little or no down-time. Injectable fillers are also widely used to enhance lip contour and volume. The results look and feel natural, but are temporary and will require maintenance every 4 to 6 months.

Botox\$10 per unit *Restylane/Perlane* ..from \$350

Anti-Aging Cosmetic Dentistry

A great smile goes hand-in-hand with beautiful youthful skin. IPL Photofacials

We offer the ultimate in skin rejuvenation using the latest Intense Pulsed Light (IPL) and laser technology. This facial treatment will quickly fade dark skin pigmentations and diminish broken blood vessels. Multiple treatments will stimulate collagen synthesis and will aid in regaining smooth skin texture and tone. This is also an excellent treatment to control rosacea and age spots.

full face\$350 mid face.....\$250
rejuv. package (4)\$1200 spot treatment from \$75

Chemical Peels (Glycolic, PCA, TCA)

Based on your skin type, we will help you choose from three levels of customized peels that exfoliate, stimulate collagen, improves pigmentation and skin tone, diminish wrinkles and pore size, increases cellular regeneration and skin texture.

per treatment\$125 package (3)\$300

Microdermabrasion

A deep pore cleansing procedure, which exfoliates and improves texture and tone while diminishing blackheads pore size and acne scars. A purifying mask or pigment gel is added to help fade age spots and facial discolourations.

per treatment\$125 package (3)\$350

Laser Hair Removal

Laser hair removal is a process that safely eliminates unwanted body hair by using various wavelengths of laser light that is selectively absorbed by the darker pigment in hair follicles. We use the latest technology of Intense Pulsed Light (IPL) or the Nd:Yag laser to deliver light energy into the follicle, which is transformed into heat that destroys the hair bulb, leaving the surrounding skin unharmed. For most people, a minimum of 7 to 10 sessions is advised to achieve permanent reduction in hair quantity and quality. All skin types can be treated safely as long as the hair is dark and the skin is not tanned.

The 7th treatment is *free!*

Come in for a free test patch and consultation. Body parts not quoted on our price list will be estimated on an individual basis.

We have lasers that are safe for darker skin types.

*Some conditions apply

Acne Blue Light – Clay Peel Treatment

A new treatment designed to improve acneic skin and maintaining a clear complexion. The facial begins with deep cleansing, followed by 12 minutes of antibacterial “blue light” therapy, ending with a stimulating amino acid clay peel. The procedure is painless and is great for exfoliating whiteheads and blackheads without damaging the skin. Best results require multiple treatments 3-4 weeks apart.

per treatment\$150
package (4)\$500

Acne Photodynamic Therapy (Levulan® ALA)

Photodynamic therapy represents the latest in light treatment to control moderate to severe acne without the side effects of traditional medications. This treatment requires exposure to a cool BLU-U light, which has been clinically proven to reduce the skin bacteria that cause acne pimples. A topical photosensitizing drug, Levulan, is first applied on the skin which is absorbed by over-active sebaceous glands. When activated by the blue light, these oil-producing glands shrink resulting in fewer breakouts. There is a period of redness (like a sunburn) that lasts for about two days while the cellular effects take place. A consultation with our medical doctor will be required to see if this treatment is right for you.

per treatment\$300

Drug cost may be covered by individual drug plans.
